The diagram illustrates the transformation of a web page from a visual layout to a single-page application (SPA) structure. It shows how components from a visual page are mapped to a JSON-LD structure and then rendered as HTML.

Visual Page Components (Left):

- Greenwich Yacht Club:** A header section with a logo and navigation links.
- Facebook Like:** A social media widget for the Greenwich Yacht Club.
- Members:** A section titled "Members - please also visit" with a link to the club's members portal.
- Learn to Sail:** A section titled "Learn to Sail" with a list of courses: "Learn to Sail", "Cruiser Fleet", and "Dinghy Fleet".

SPA Structure (Right):

- HTML Output:** The SPA structure is rendered as a single HTML page. It includes the Facebook Like button, the member information, and the list of sailing courses.
- JSON-LD Structure:** The SPA structure is defined by a JSON-LD object. It includes the club's name, the Facebook Like button, the member information, and the list of sailing courses.

Key Transformations:

- The visual page components are mapped to the SPA structure using a mapping function.
- The SPA structure is rendered as a single HTML page using a rendering function.
- The JSON-LD structure is used to define the SPA structure and the data it contains.

Revision as of 17:59, 25 June 2021

We are a friendly, member-run club with an amazing clubhouse on the river Thames, just three miles downriver from Tower Bridge.
Members - please also visit the [members portal](#)
